

# Safety instructions for the installation and use of protective film for the device display

**Manufacturer:** 3mk Protection sp. z o.o.  
Ul. Krotoszyńska 35 B-02 Lok. 4A  
63-400 Ostrów Wielkopolski; Polska  
3mk@3mk.pl

## 1. Preparation before installation:

- o Choose a clean, dust-free and dry place for applying the film.
- o Make sure you have all the necessary accessories:
  - Microfiber cloth
  - Alcohol wipe (if included in the set)
  - Dust removal stickers
  - Smoothing card for the film (if included).
- o Wash your hands thoroughly to avoid leaving greasy marks on the film or screen.

## 2. Safe film application:

- o Switch off the device before starting the application so that you can clearly see any dirt on the screen.
- o Clean the screen surface with an alcohol wipe, then wipe it with a microfiber cloth.
- o Use stickers to remove remaining dust particles. Even small contaminants can cause air bubbles.
- o Gently separate the film from the protective layer, taking care not to touch the adhesive side.
- o Slowly apply the film to the screen, starting from one edge and gradually moving downward.
- o Use a smoothing card or cloth to remove air bubbles by pushing them toward the edge of the screen.
- o Do not try to peel the film off abruptly during installation to avoid damaging the adhesive.

## 3. After installing the film:

- o Do not press too hard on the surface of the film, especially at the edges, to prevent it from peeling off.
- o Leave the device for a few hours after application so that the adhesive can bond well with the screen surface.
- o Avoid contact with sharp objects that may damage or puncture the film.

## 4. Use and maintenance of the film:

- o Clean the surface of the film regularly with a microfiber cloth. Avoid using chemical cleaning agents that may damage its surface.
- o Protect the phone from extreme temperatures that may affect the properties of the film adhesive (e.g. direct sunlight or frost).
- o Avoid bending the film during removal so as not to leave permanent deformation.

## 5. What to do if the film is damaged:

- o If the film is damaged (crack, tear, peeling), replace it immediately to ensure continued protection of the device screen.
- o When removing the film, be careful not to scratch the screen surface.
- o Dispose of the used film according to the plastic waste sorting rules.

## 6. Additional precautions:

- o The film protects the screen from scratches, but does not provide full protection against drops. It is worth using the film together with a protective case.
- o Check the condition of the film regularly to avoid issues with display visibility or touchscreen operation.

**Following the above rules will allow correct application and use of the protective film, ensuring safety and the aesthetic appearance of the device screen.**
